Doctor House

By: Alen Eftimov and Manish khadgi Shahi

Start project: 11.08.2020
Deadline of Project: 24.08.2020

Description

Dr House is a multi-purpose free healthcare website. Which you can use for building hospital, clinic, doctor, dentist and surgeon pages to name a few. You can go the generic or the niche way, whatever you do, Dr House guarantees a stupendous final product that will grow your medical business to new successes. Couple your professional services with template's clean and distraction-free look and boost your potential through the roof.

In the Dr House bundle, you will discover a terrific home page, as well as several additional and highly practical internal designs. It sports a marvelous and filterable clinic departments section, testimonials slider, free consultation form and pricing plans. With Dr House, you can also start writing a blog, show your location on Google Maps and let them get in touch with you via the functional contact form.

Creating idea

- make all Functional website page

- make Registration and login page
- make Admin page

Limitation

- using HTML
- using CSS
- using JavaScript
- using Node
- using Express
- using Ejs
- using Cookie-parser
- using Express-file-upload
- using Express-session
- using Password-hash
- using MongoDB
- using mongoose
- using MySQL

Concept of Idea

Making multi-purpose website. which we can use for every day life for doctor and patient.

Details

- using making front-end design / 2 days
- using Node method for back-end / 3 days
- using database(MongoDB, Mongoose, MySQL) / 1day

- using Heroku, GitHub and Problem solving/ 1day

Goal

Just try to repeat what we learn and try to make it better
Thank you.
